#### **ABSTRACT**

The purpose of the study reported here was to determine whether or not salary expenditures may be driving the rapid increase in higher education expenditures overall. Using data from the Finance Survey of the Integrated Postsecondary Data System, the study examined figures for fiscal year 1988 through fiscal year 1991. The changing relationship between functional expenditures and salary expenditures were analyzed in terms of expenditures per full-time equivalent (FTE) student to account for observed changes in total related expenditures or salaries due to expanding or declining enrollment. The analysis found that for public 4-year institutions small increases in expenditures cannot be attributed to increases in salary. At private colleges and universities salary expenditures make up a smaller proportion of total related functional expenditures than at public institutions. Salary expenditures remained stable in all expenditure categories (except operations and maintenance) at public 2-year institutions. At private, nonprofit 2-year institutions salary expenditures per FTE increased in all related functional categories since fiscal year 1988 led by instructional salary expenditures which increased 14.2 percent. The study concluded that salary expenditures continue to be a major component of total expenditures, and the proportion of expenditures allocated to salaries is increasing. Includes 12 tables. (JB)

# Higher Education Salary Expenditures by Expenditure Function, FY 1988–1991

Contact: Kristin Keough (202) 219–1680

Author: Kristin Keough Higher education expenditures are increasing faster than the rate of inflation. Analysis of institutional cost structures can help to determine what components are affecting the overall increase in expenditures. Salaries expenditures are a key component of institutional cost structures and, in fact, may be driving the rapid increase in higher education expenditures.

The Finance survey, part of the Integrated Postsecondary Data System (IPEDS), collects data on salary expenditures by expenditure function so that instructional expenditures, for example, can be linked with salary expenditures for instruction. The proportion of functional expenditures allocated to salaries and the rate of salary expenditure increases over time give a clear picture of the impact that salary expenditures have on all other higher education expenditures. Functional expenditure and salary expenditure data are presented here for 4 years—fiscal year 1988 through fiscal year 1991. Since cost structures vary by type of institution, and the impact of salary expenditures is different for public versus private schools or for 4-year versus 2-year schools, data are presented by institutional sectors (see Response Rates). Finally, the changing relationship between functional expenditures and salary expenditures are analyzed in terms of expenditures per full-time equivalent (FTE) student to account for observed changes in total related expenditures (i.e., expenditures for which salaries are allocated) or salaries due to expanding or declining enrollment (see Survey Background). Total FTE students are all full-time students plus one-third of part-time students.

### Characteristics of Salary Expenditures by Institutional Sector

**Public 4-year institutions.** Overall, small increases in expenditures at public 4-year schools cannot be attributed to increases in salary expenditures. Since fiscal year 1988, total salary expenditures per FTE increased only .2 percent in constant dollars while the total increase for related expenditures per FTE was 1.7 percent. A decrease in salary expenditures per FTE accounted for most of the decrease in expenditures per FTE of the related functional categories (instruction, institutional support, and operation and maintenance) (table 6).

The distribution of expenditures has changed in 4 years as well, with total salary expenditures as a percentage of total related functional expenditures decreasing from 61.3 percent in fiscal year 1988 to 60.2 percent in fiscal year 1991 (table 1).

Private, nonprofit 4-year institutions. Salary expenditures make up a smaller proportion of total related functional expenditures at private 4-year institutions than at public 4-year institutions. In 1991, salary expenditures at private 4-year institutions were 54.3 percent of total related expenditures and 60.2 percent at public 4-year institutions (tables 1 and 2). However, salary expenditures increased at a greater rate than related expenditures at private institutions—since fiscal year 1988, total salary expenditures per FTE increased 4.4 percent in constant dollars while the total increase for the related expenditures per FTE was 4.1 percent (table 8).

All categories of salary expenditures per FTE (except for operation and maintenance) increased at private 4-year institutions in constant dollars since fiscal year 1988. For example, instructional salary expenditures per FTE were \$4,254 in this sector in 1991, an increase of 5.1 percent in constant dollars since fiscal year 1988 (table 8). This compares with instructional salary expenditures per FTE of \$3,650 at public 4-year institutions, which decreased 1.0 percent in constant dollars in 4 years (table 6).

Private 4-year schools have a higher percentage of salary expenditures in the administrative categories (academic support, student services, institutional support, and operation and maintenance) than public 4-year institutions (tables 1 and 2).

Public 2-year institutions. Salary expenditures remained stable in all expenditure categories (except operation and maintenance) at public 2-year institutions with total salary expenditures per FTE increasing only 2.0 percent in constant dollars since fiscal year 1988 (table 10).

These institutions allocated more to instructional salaries in 1991 as a percentage of total salary expenditures (60.4 percent) and as a percentage of instructional expenditures (74.7 percent) than institutions in other sectors (table 3). However, instructional salary expenditures per FTE were almost half of those at public 4-year institutions (\$3,650 versus \$1,984, respectively) (table 10).

Private, nonprofit 2-year institutions. In constant dollars, salary expenditures per FTE increased in all related functional categories since fiscal year 1988, led by instructional salary expenditures which increased 14.2 percent (table 12). Total salary expenditures per FTE and instructional salary expenditures per FTE were comparable to those at public 2-year institutions (tables

10 and 12). Student services and institutional support salary expenditures, as a percentage of total salary expenditures, are higher at private 2-year institutions than for institutions in the other three sectors (table 4).

General characteristics. Salary expenditures per FTE are increasing more rapidly than total expenditures per FTE in all sectors except for public 4-year institutions. A notable exception is salary expenditures per FTE for operation and maintenance, which have declined since fiscal year 1988 in all sectors except for private 2-year institutions (tables 6, 8, 10, 12).

In general, a higher proportion of total salary expenditures was allocated to administrative salaries (academic support, student services, institutional support, operation and maintenance) at private than at public institutions and at 2-year than at 4-year institutions. In 1991, administrative salaries made up 35.8 percent of total salaries at private institutions and 33.4 percent at public institutions; administrative salaries made up 37.9 percent of total salaries at 2-year institutions and 31.7 percent at 4-year institutions (derived from tables 1-4).

In constant dollars, administrative expenditures per FTE have increased most at private 4-year institutions (4.6 percent) along with administrative salary expenditures per FTE (3.9 percent) (derived from table 8). In that same period, administrative expenditures per FTE have decreased 1.1 percent in constant dollars at public 4-year institutions, led by a 1.8 percent decrease in administrative salary expenditures per FTE (derived from table 6). Administrative salary expenditures per FTE increased at both 2-year public and private institutions (derived from tables 10 and 12).

Public 4-year institutions are increasingly allocating a larger proportion of total salary expenditures to research activities—from 13.4 percent in fiscal year 1988 to 14.2 percent in fiscal year 1991, while the percentage of total salary expenditures allocated to research decreased by .3 percent at private 4-year institutions since fiscal year 1988 (tables 1 and 2).

### **Conclusions**

Salary expenditures continue to be a major component of total expenditures, and the proportion of expenditures allocated to salaries is increasing. The percentage increase in salary expenditures per FTE has been greater than the percentage increase of the total related functional expenditures per FTE in all sectors except for public 4-year institutions.

Instructional salary expenditures have the most impact on expenditures and, in all sectors except for public 4-year institutions, the percentage of instructional salary expenditures per FTE has increased more rapidly than instructional expenditures per FTE in constant dollars since fiscal year 1988.

In the 1990-91 academic year, the average full-time faculty salary was highest at public 4-year institutions (\$44,497) as was the reliance on full-time faculty (79.3 percent). Private 4-year institutions had a lower percentage of full-time faculty (64.4 percent), and the average full-time faculty salary was \$42,183. Although average faculty salaries were lower and fewer full-time faculty were employed at private 4-year institutions, instructional expenditures per FTE were higher at private than at public 4-year institutions. Public 2-year institutions relied least on full-time faculty (39.4 percent), and the average full-time faculty salary was \$37,064. The average full-time faculty salary was \$24,017 at private 2-year institutions with 54 percent of all faculty employees full-time. Lower instructional salary expenditures per FTE at 2-year institutions may be attributed as much to the use of part-time faculty as to the amount of full-time faculty salaries. 2

Administrative salary expenditures per FTE are decreasing at public 4-year institutions while administrative salary expenditures are increasing at private 4-year institutions. However, one component of administrative salary expenditures is not generally increasing—operation and maintenance salary expenditures have declined as a percentage of all salary expenditures in all sectors; and operation and maintenance salary expenditures per FTE have declined in constant dollars in all sectors (except for private 2-year institutions) since fiscal year 1988. Institutions are making obvious efforts to limit expenditures via controlling salary expenditures in this area.

### **Survey Background**

The Finance survey is part of the Integrated Postsecondary Education Data System (IPEDS), which has replaced the Higher Education General Information Survey (HEGIS) The finance data in this report represent public and private, nonprofit (2-year and above) higher education institutions in the 50 states and the District of Columbia. Higher education institutions are accredited at the college level by an agency recognized by the U.S. Secretary of Education.

The Finance survey collects data annually on salary expenditures of all higher education institutions by expenditure function. In reporting financial data, institutions allocate total salary expenditures to instruction, research, public service, academic support, student services, institutional support, and operation and maintenance of plant. The total related functional expenditures compose a large part of educational and general expenditures but do not include scholarship and fellowship expenditures, mandatory and nonmandatory transfers for which salary data are not relevant. Functional expenditure categories are consistent with definitions in the Financial Accounting and Reporting Manual for Higher Education (published in 1990 by the National Association of College and University Business Officers). Salary expenditure data are collected for all employees, including faculty, staff, full-time and part-time employees; these data do not include fringe benefits.

### **Response Rates**

The number of higher education institutions in the sectors included in this report that received a survey form in the 50 states and the District of Columbia by level and control of the institution are shown in table A. The response rates were calculated as the ratio of the number of institutions responding to the survey divided by the number of eligible institutions receiving the survey form.

Table A.—Survey response rates for institutions of higher education by level and control, 50 states and the District of Columbia: Fiscal year 1991

Sector	Institution level and control	Number receiving form	Number responding	Response rate
1	Public, 4-year	610	597	97.9
2	Private, nonprofit, 4-year	1,511	1,295	85.7
4	Public, 2-year	974	917	94.1
5	Private, nonprofit, 2-year	165	127	77.0

NOTE: Sectors 3 and 6-9 are not included.

### **Imputation Procedures**

If institutions did not respond to the fiscal year 1991 Finance survey, data in part A (Current Funds Revenues), part B (Current Funds Expenditures), and part E (Scholarship and Fellowship Expenditures) were imputed. Salary data, which are included in part B, were imputed for nonrespondents by the method used for imputing all expenditure data.3 If institutions responded to the Finance survey but did not report salary data in part B, the following item imputation procedures were used: For institutions that responded in he previous year, a ratio of salary to expenditure function was calculated and multiplied by a percentage increase based on institutional level and control. For institutions that did not provide salary data by expenditure function but reported an amount for total salary expenditures (part B, line 23), the amount for total salary expenditures was distributed to each functional area based on the distribution of responding institutions in the same institutional sector (level and control).

For this report, institutions were included in the analysis of related functional expenditures per FTE and salary expenditures per FTE only if reported or imputed finance and enrollment data were present.
